

KWABENA KUMI BOAHENE

kkboahene003@gmail.com — Accra, Ghana — +233505788954 — [LinkedIn](#) — [GitHub](#) — [Portfolio](#)

PROFESSIONAL SUMMARY

Full-stack Software Engineer with demonstrated ability to design, build, and ship production web applications end-to-end. Proficient in Python, React, Next.js, TypeScript, and Node.js, with solid experience in PostgreSQL database design, RESTful API development, and secure authentication systems as well as Tailwind CSS. Passionate about building products that work at scale, with a growing interest in data-powered applications. Demonstrated ability to build production-grade systems from the ground up, optimize backend performance, and deliver reliable, maintainable code across diverse project environments.

PROFESSIONAL EXPERIENCE

Backend Web Developer

October 2025 – December 2025

Farm Estates Ltd

- Designed and implemented 15+ RESTful APIs for a data-driven agricultural platform (users, farms, sensors, alerts, logs) — writing clean, well-documented, maintainable code with clear separation of concerns.
- Built secure authentication and authorization using JWT and session handling, applying best practices for access control and data integrity across all restricted endpoints and data integrity.
- Integrated backend services with a Flutter front end and deployed/maintained the system on DigitalOcean, managing production environment stability and basic networking configuration.
- Modelled and managed relational databases to support complex data pipelines, ensuring consistency, integrity, and query performance.

Web Developer

May 2024 – May 2025

BrandAfrik (Freelancing)

- Designed, built, and deployed full-stack web applications for SME clients across Ghana, focused on internal business tools, attendance management, and membership platforms.
 - Collaborated directly with clients to translate requirements into working product features — owning the full cycle from architecture through deployment and post-launch support.
 - Administered hosting environments, domain registration, DNS configuration, and SSL setup — applying practical networking fundamentals to keep client web applications secure and reachable.
 - Designed and maintained relational databases supporting membership records, reporting, and event management.
-

PROJECT EXPERIENCE

Office Attendance Management System

May 2026 – June 2026

- Architected a production-grade full-stack platform using Next.js (App Router), React, TypeScript, Tailwind CSS, and Supabase with strict separation of concerns across API routes— collaborating with AI coding agents throughout the development lifecycle and critically evaluating all AI-generated outputs before integration

- Designed a multi-table PostgreSQL (Supabase) schema covering members, departments, visitors, and attendance records — implementing Row Level Security policies, performance indexes, and automated database triggers to enforce data integrity through collaborating with AI coding agents.
- Integrated real-time face recognition via face-api.js, browser Geolocation API with reverse geocoding, bulk CSV import, automated SMTP email dispatch, and a Recharts reporting dashboard with CSV export.
- Implemented an end-to-end observability pattern across API routes: structured request logging with unique request IDs, and layered error handling that surfaces actionable context server-side while returning safe, generic responses to clients collaborating with AI coding agents.
- Identified and corrected multiple AI hallucinations during development — including incorrect RLS policy syntax, non-existent Supabase API methods, and suboptimal query patterns — documenting each finding and the corrective approach taken. [View here](#)

Church Management System

March 2026 – April 2026

- Co-developed full-stack management system using Node.js and Next.js API routes, with a Supabase (PostgreSQL) database integrating AI coding assistants throughout the workflow for code generation, debugging, and refactoring tasks
- Designed a Supabase (PostgreSQL) relational database with Row Level Security (RLS) and Supabase Auth, implementing role-based access control for multiple user roles.
- Developed a QR code attendance system that generates unique per-service QR codes and captures real-time GPS coordinates via the Browser Geolocation API for seamless mobile check-ins.
- Used multiple AI tools in parallel to compare output quality for the same implementation tasks, selecting and refining the best outputs based on correctness, maintainability, and security
- Designed a professional office-grade UI system with a collapsible sidebar, role-aware navigation, modal system, status badges, and a fully accessible form library — all styled via CSS custom properties in globals.css. [View here](#)

SKILLS

Technical Skills:

- **Languages:** TypeScript, JavaScript (ES6+), Python, SQL
- **Frontend:** React, Next.js (App Router), Tailwind CSS, HTML5, CSS3
- **Backend:** Node.js, Next.js API Routes, REST API design, JWT authentication, Python, FastAPI
- **Databases:** PostgreSQL(Supabase), MongoDB, Appwrite, schema design, query optimization, RLS
- **Cloud & DevOps:** Git & GitHub, Vercel, environment config, domain/DNS/SSL management, DigitalOcean, Docker

Soft Skills: Communication skills, Interpersonal and Collaborative skills, Time management and Productivity, Problem Solving and Critical Thinking, Adaptability and Growth Mindset, Professionalism and Work Ethics, Working well under pressure

EDUCATION

MEST Africa

August 2025 - November 2025

Web Development Training

University of Ghana, Legon

August 2019 – August 2023

Bachelor of Arts (B.A.) – Economics and Mathematics (Combined Major)
