PROFESSIONAL SUMMARY

A full-Stack Developer with 2+ years of production experience designing and building and deploying web and mobile applications using React, React Native, Node.js, and TypeScript, alongside backend systems in Python (FastAPI) and PostgreSQL. Genuinely hands-on with modern AI development — has designed and deployed a retrieval-augmented, multi-step tool-calling agent using the Anthropic API, covering prompting, tool/function calling, agent reasoning loops, and session memory. Comfortable researching and picking up new technologies quickly, with a track record of shipping full-stack products end-to-end, from architecture through deployment.

PROFESSIONAL EXPERIENCE

Backend Web Developer

October 2025 – December 2025

Farm Estates Ltd

- Designed and implemented 15+ scalable RESTful APIs for a data-driven agricultural platform (users, farms, sensors, alerts, logs) — writing clean API contracts and documentation.
- Architected JWT-based authentication and session handling across all restricted endpoints.
- Modelled relational databases supporting complex data pipelines, ensuring consistency and query performance.
- Integrated backend services with a Flutter front end and deployed/maintained the system on DigitalOcean, managing production environment stability and basic networking configuration.

Web Developer

May 2024 – May 2025

BrandAfrik (Freelancing)

- Designed, built, and deployed full-stack web applications for SME clients across Ghana, focused on internal business tools, attendance management, and membership platforms.
 - Owned full project lifecycle — from architecture through deployment and post-launch support
 - Designed relational databases with schema design, indexing, and data integrity constraints
 - Administered production environments including hosting, DNS/SSL configuration, and security.
-

PROJECT EXPERIENCE

Agentic Document Assistant

August 2026

- Built and deployed a backend service combining retrieval-augmented generation (RAG) with a multi-step Claude tool-calling agent, using FastAPI and the Anthropic API.
- Implemented document ingestion, chunking, similarity-based retrieval, and multi-step agent reasoning with tool-calling and per-session memory
- Designed and integrated an agentic AI pipeline handling document ingestion, embedding, retrieval, and response generation
- Comprehensive Pytest coverage across API endpoints, core logic, and the agent loop, including tests run against a mocked LLM client
- Demonstrates disciplined approach to test engineering: unit tests, integration tests, and endpoint validation. Deployed on Render. [API Docs](#)

Church Management System

March 2026 – April 2026

- Built and deployed a full-stack platform (Node.js, Next.js API routes, Supabase/PostgreSQL) serving 100+ active church members, with Row Level Security and role-based access control

- Developed a QR code attendance system with real-time GPS capture for mobile check-ins
- Integrated automated email workflows and deployed to production with custom domain configuration.
- Built and deployed a full-stack platform (Node.js, Next.js API routes, Supabase/PostgreSQL) serving 100+ active church members, with Row Level Security and role-based access control [Live](#)

Office Attendance Management System

May 2026 – June 2026

- Architected a production-grade full-stack attendance platform (Next.js, React, TypeScript), actively used by 30+ staff members daily.
- Designed a multi-table PostgreSQL (Supabase) schema with Row Level Security policies, performance indexes, and automated triggers to enforce data integrity
- Implemented end-to-end observability: structured request logging with unique request IDs, sanitized payload capture, and layered error handling — safe generic responses to clients, actionable context server-side
- Containerized local development with Docker for dev-to-production parity. [Live](#)

NexStep – Career Grooming Agency

October 2025

- Developed and maintained backend services using FastAPI and SQLAlchemy, with MongoDB and Cloudinary, supporting a mentorship and talent-engagement platform
- Designed and implemented 10+ RESTful APIs covering mentorship, trainee, and admin flows
- Enforced JWT-based authentication and session handling across all restricted endpoints
- Deployed and monitored production environment on Render. [API Docs](#)

SKILLS

Technical Skills:

- **Languages:** JavaScript (ES6+), TypeScript, Python, SQL
 - **Frontend & Mobile:** React, React Native, Next.js, HTML5, CSS3
 - **Backend:** Node.js, FastAPI, SQLAlchemy, REST API design, JWT authentication
 - **AI/LLM:** Anthropic API, prompt engineering, RAG pipelines, tool/function calling, agent design, session memory, Claude Code, Cursor, GitHub Copilot, Codex.
 - **Databases:** PostgreSQL (Supabase), Appwrite, MongoDB, schema design, query optimization, Row Level Security
 - **Cloud & DevOps:** Linux, Git & GitHub, Docker, DigitalOcean, Render, Vercel, basic AWS.
- Soft Skills:** Communication · Collaboration · Time Management · Problem Solving · Critical Thinking · Adaptability · Growth Mindset · Working Well Under Pressure
-

EDUCATION

University of Ghana, Legon

August 2019 – August 2023

Bachelor of Arts (B.A.) – Economics and Mathematics (Combined Major)

Generation Ghana & MEST Africa

August 2025 - November 2025

Web Development Training
